

01 – Brainstorming and Ideation

LegalEase: AI-Powered Legal Document Generator

Team Leader: R. Vidhya kumaran

Team Members: R. Tharun, M. Suyambu lingam

Academic Project Documentation

1. Problem Statement

People often struggle to prepare structured legal-document drafts because legal language can be difficult to understand and document preparation can be time-consuming. LegalEase explores a guided AI-assisted workflow that converts user-provided facts into an organized first draft.

2. Proposed Solution

LegalEase combines a guided form, document templates, AI-assisted drafting, validation, editing, and export. The user remains responsible for reviewing the generated content.

3. Target Users

- Students and academic users studying legal-document workflows
- Individuals preparing preliminary drafts
- Small organizations needing structured first drafts
- Administrative staff who need repeatable document formats

4. Brainstormed Features

- Document-type selection
- Smart form fields
- AI prompt/template engine
- Missing-information alerts
- Editable preview
- PDF/DOCX export
- Version history
- Disclaimer and professional-review reminder

5. Innovation

The project focuses on combining structured data collection with AI generation rather than accepting an unstructured prompt. This improves consistency and makes missing information easier to identify.

6. Expected Outcome

A demonstrable prototype that can accept inputs, generate a structured draft, display it for review, and provide an export-ready result.
