

05 – Project Development

LegalEase: AI-Powered Legal Document Generator

Team Leader: R. Vidhya kumaran

Team Members: R. Tharun, M. Suyambu lingam

Academic Project Documentation

1. Development Overview

The prototype is organized into a client-side form workflow, a UI-policy/validation layer, and a generation service. The supplied sample files illustrate the core logic and can be adapted to the chosen implementation platform.

2. Client-Side Flow

The client collects document type and user inputs, validates required fields, displays progress, and renders the generated draft in an editable preview.

3. UI Policy

UI policies control visibility, mandatory status, and read-only behavior for fields based on the selected document type.

4. Responsible AI Controls

- Do not fabricate facts.
- Preserve placeholders for missing facts.
- Show a human-review notice.
- Keep API keys on the server.
- Log errors without storing unnecessary sensitive content.

5. Development Status

This package provides a project-ready academic prototype specification, sample client logic, UI-policy logic, and mock screenshots. Replace placeholder AI/API integration details with the institution-approved implementation before deployment.
