

07 – Project Documentation – Detailed

LegalEase: AI-Powered Legal Document Generator

Team Leader: R. Vidhya kumaran

Team Members: R. Tharun, M. Suyambu lingam

Academic Project Documentation

1. Introduction

LegalEase is an academic software project demonstrating how AI can assist with the first-draft stage of legal-document preparation.

2. Objectives

- Reduce repetitive drafting effort.
- Improve structured data collection.
- Provide a clear review workflow.
- Demonstrate responsible AI integration.
- Provide export-ready document formatting.

3. Core Modules

- Authentication/User Session
- Document Type Catalog
- Dynamic Form Builder
- Validation Engine
- AI Prompt/Template Engine
- Draft Review Editor
- Export Service
- Audit/Error Logging

4. Security and Privacy

Credentials and API keys must never be embedded in browser code. User-provided document content should be protected in transit and at rest. Retention should be minimized, access should be restricted, and users should be informed about how their data is handled.

5. AI Limitations

Generative AI can produce incorrect, incomplete, outdated, or contextually unsuitable text. LegalEase therefore treats AI output as a draft, not a legal conclusion. Professional review is recommended before real-world use.

6. Future Enhancements

- Multi-language drafting with human review.
- Clause library with version control.
- Citation/source verification where appropriate.
- Organization-level access control.
- Document comparison and change tracking.
- E-signature integration subject to applicable requirements.

7. Conclusion

LegalEase demonstrates an end-to-end workflow for AI-assisted document drafting while emphasizing validation, privacy, transparency, and human review.
